Academic Qualifications

Year	Degree/Certificate	Institute	CPI/%
2022 - 2026	B.Tech (Computer Science)	SRM Institute of Science and Technology, Chennai	8.4/10

Work Experience

MACHINE LEARNING INTERN — Jio Platforms Ltd. (Reliance Industries) (Apr'26 - Jun'26)			
Objective	To architect, optimize, and deploy high-throughput asynchronous microservices alongside highly scalable vector search engines designed specifically to process intensive real-time multi-model computer vision workloads.		
Approach	- Engineered FaceTools: an asynchronous multi-container microservices ecosystem driving decoupled deep learning model pipelines powered by ONNX Runtime, YOLOv8 object tracking, and high-precision ArcFace classification modules using parallelized asyncio worker pools. - Designed and optimized the comprehensive FaceVision analytical core, executing distributed DBSCAN clustering routines over dense 512-dimensional vector embedding arrays while establishing normalized PostgreSQL relational tables for fast spatial similarity queries.		
Outcome	Successfully decentralized core analytics microservices across an enterprise-grade Nginx reverse proxy gateway communicating with a decoupled React frontend interface, fully automating end-to-end production deployment workflows using GitHub Actions.		

Key Projects

SMP: QUANTITATIVE EQUITY VALUATION ENGINE		Link:	github.com/Akd2510/SMP	(May'26 - Jun'26)
Objective	Build a fully autonomous, institutional-grade equity valuation engine to aggregate, parse, clean, and monitor real-time financial telemetry workflows.			
Summary	Architected a stateful financial pipeline via LangGraph cyclic architectures; decoupled qualitative market sentiment modeling from quantitative engines to compute automated Discounted Cash Flow (DCF) and Comparable Company Analysis (CCA).			
Outcome	Generated comprehensive, presentation-ready investment memoranda detailing core growth indicators, absolute valuations, and relative sector benchmarks.			
LANDSLIDE SUSCEPTIBILITY MAPPING		Link:	github.com/Akd2510/uk_ml_major	(Jan'26 - Apr'26)
Objective	Develop an advanced, end-to-end predictive geospatial machine learning architecture optimized to evaluate, map, and output high-resolution geological hazard susceptibility profiles across diverse terrain environments.			
Summary	Ingested global landslide datasets with Google Earth Engine terrain arrays (SRTM DEM, TWI, NDVI) and IMD netCDF records; handled severe data class imbalance through stratified 5-fold cross-validation and trained balanced random forests.			
Outcome	Achieved a macro F1 score of 0.93 and a 0.663 AUC-ROC profile , leveraging SHAP explainability matrices to precisely isolate high-susceptibility hazard zones.			
PROJECTTRAN: TRANSIT TRACKER		Link:	github.com/Akd2510/ProjectTran	(Dec'25 - Jan'26)
Objective	Engineer a scalable, production-ready transit tracker web application supporting high-fidelity real-time asset tracking infrastructure configurations.			
Summary	Rendered synchronized spatial paths over Google Maps geometric APIs using Next.js framework layers; designed a highly normalized PostgreSQL relational database utilizing Prisma ORM with target B-tree query indexing workflows.			
Outcome	Integrated automated live weather API parameters and engineered secure, persistent user session authentication pipelines via Supabase Auth engines.			
MOTION: COLLABORATIVE WORKSPACE		Link:	github.com/Akd2510/Motion	(Jun'25 - Nov'25)
Objective	Architect a high-concurrency, real-time collaborative document workspace platform engineered to maintain seamless and reliable state synchronization dynamics.			
Summary	Configured low-latency canvas operations via Firebase Realtime Database socket protocols; built custom debounced state controllers and optimized local DOM re-renders to prevent sudden interface layout stutters.			
Outcome	Created custom client-side state caching layers to fully insulate active document operational frames against abrupt local network dropouts.			

Technical Skills

Languages	Python, Java, C++, JavaScript, TypeScript, SQL, relational database query optimizations, structural data paradigms.
ML & Vision	Scikit-learn, OpenCV, MediaPipe, ONNX Runtime, NumPy, Pandas, Matplotlib, SHAP, LangGraph architectures, neural embeddings.
Frameworks	React, Next.js, Node.js, FastAPI, Django, REST APIs, Firebase, Supabase, Prisma ORM systems, Tailwind CSS styling.
DevOps & OS	AWS micro-foundations, GCP (BigQuery, Earth Engine), Docker, Nginx, GitHub Actions, continuous integrations, Git, Linux, Windows.

Certifications & Coursework

Certificates	Investment Banking with Finance (Launched in partnership with IIT Roorkee) Google Cloud Data Analytics (BigQuery, Looker Studio) AWS Machine Learning Foundations (SageMaker, ML Workflows) Cisco Networking Basics
Coursework	Advanced Data Structures & Algorithms, Machine Learning Systems, Computer Vision Core, Database Management Systems, Operating Systems.
